ELECTROLYSIS

PRE + POST-CARE GUIDE
WHAT TO EXPECT AND HOW TO
CARE FOR YOUR SKIN BEFORE AND
AFTER YOUR ELECTROLYSIS TREATMENT

PER-TREATMENT INFORMATION

[1] If you are treating sun exposed areas, apply sunblock of at least SPF 50 each morning for one month before treatment.

[2] Refrain from bleaching, tweezing, threading of hairs in desired treatment area for six (6) weeks. It is fine to cut, shave or trim the area as desired.

[3] If you have a history of herpes or cold sores, you may need antiviral medication. This medication should start one (1) day before and continue for one week after treatment or as directed.

[4] Please do not taking any photosensitive medications, use peels or any other products that make your skin sensitive prior to treatment.

[5] Arrive with the treatment area clean and free of make-up, lotions or oils and with short stubble if possible.

POST-TREATMENT INFORMATION

[1] Treat the area gently by keeping the skin moist with healing ointment for a few days. Three times per day for three (3) days is recommended.

[2] Cleanse the area with healing agents and avoid using soap or abrasive material for at least 24-hours post-treatment.

[3] Do not pick, rub or scratch the area. Do not use any irritating substances on the treated area until the skin returns to normal.

[4] If the treated area will be exposed to sun, apply SPF 50 or greater after the skin returns to normal.

[5] If your face was treated, you may resume using clean make-up when the skin looks and feels back to normal. Test in a small area to start. If there are any issues, please call us and/or your doctor.

[6] Exfoliation is recommended to prevent in-growns and enhance the health of your skin.

[7] Healing kits are available for home care.
